

Easy opening doors

SHIPPING CONTAINER RANGE FOR HIRE AND SALE

One-trip, used and specialist

Portable Space offers a wide range of new 'one trip' and used shipping containers for sale in 8ft, 10ft, 20ft, 30ft and 40ft lengths and various configurations.

These are suitable for many different uses including on construction sites, commercial organisations, academic institutions and for household storage needs.

The standard container has a single set of double doors on the end and new containers incorporate Easy Opening Doors which can be operated by all users.

There is also a range of different container designs including: high-cube, open-sided, tunnel and bundled.

Why not come along to our headquarters near Stowmarket and see our stock at first hand?

One-trip high cube

These are 9ft 6" high containers – a foot or 300mm higher than a standard shipping container – and are available for sale as one trip and used containers. This additional height is useful for storing over-height items or when the storage container needs volume rather than floor space. They are ideal for secure storage of mini diggers.

One-trip open-sided

The type of doors or openings to your storage container depends on what you plan to store and how often you need to access it. Our standard containers are 2.34 metres wide and have one double set of doors 2.28 metres high at one end for access. So for long items, we offer containers with full-side access in 20ft and 40ft lengths.

One-trip, used and specialist continued

One-trip tunnel

Also known as double-end door containers or 'tunneltainers', these are excellent for giving access to stored items from both ends. There is also the option to weld in steel bulkheads to create two separate 10ft compartments (popular with self-store companies to save money). Tunnel units are also popular as temporary bridges and for use as ticket entrances at large events.

Bunded

A bundled container is ideal for storing hazardous liquids as it has a secondary internal structure to protect the environment from spills of chemicals or liquids. Various types and sizes are available to meet all specifications, with a range of accessories including standard and Zone 1 lighting, ventilation, anti-condensation paint, shelving, lining out and insulation.

Used containers

Standard used containers offer the most cost-effective storage and are available in 20ft and 40ft lengths or 40ft in the high-cube design. As Portable Space buys the containers directly from shipping lines, they are wind and water tight and come in a choice of colours. They are suitable for a wide range of users but not recommended for delicate items or soft furnishings. A lockbox for padlocks does not come as standard but can be fitted. Used containers can also be cut to bespoke sizes where required.

Accessories

A selection of shipping container accessories is on offer, including shelving, electrics, padlocks and Grafo-therm anti-condensation coating. For more extensive modifications, our in-house conversion team can provide complete CAD and fabrication services.

Flat Pack

There's also a range of Flat Pack storage containers for locations where access is limited. This is a practical alternative and light enough to be offloaded in sections from a flat bed pick-up. A Flat Pack container is made up from sections that are compact enough to fit through small passageways. The range includes bundled Flat Pack containers (Chemstore) which have a secondary internal structure to protect the environment from spills of chemicals or liquids stored inside.

CONTAINER CHECKLIST

Before choosing your container, check out:
