

Portable Space delivery guide

Delivery information

Please read the following carefully and if your location requires anything different, please talk to us in advance.

- Our lorries are capable of delivering your cabin or container to the side and at 90 degrees to the lorry, just clear of the stabiliser leg.
- Our fleet includes larger cranes for challenging situations – including offloading in front of the cab – but it's essential you discuss with us ahead of the delivery.
- It is important to consider the size of the lorry in terms of the delivery location including height restrictions, overhead obstructions, space for turning corners and entering gates.
- Portable Space is not responsible for any damage to manhole or drain covers or surfaces (such as pavements, fields or grass) during delivery. As a rule we do not drive over soft ground (such as grass or fields).
 - In the event of our vehicle getting stuck, you will be liable for the cost of recovery and any damage incurred.
- Any parking or permit charges incurred will be charged back to customer.
