PRODUCT DETAILS

The 190mm x 190mm white motion sensor activated magnet ceiling light emits 300 lumens from ultrabright LED lights. The wireless design and long battery life makes it an excellent and cost effective method to light up your container.

The magnet attaches itself to the walls or ceiling or screw fixing options are available if the container is lined out.

The motion sensor will only be activated when darkness is detected saving valuable battery life. Movement can be detected 6m away and the light will stay illuminated for 20 seconds after the last motion was detected.

The battery life is estimated at 6-12 months when operated 8-10 times per day.

Requires 4 x 'D' batteries. These are supplied with the unit.

We recommend one light per 10ft in a container.
